

Clean Up Your Data (CUYD) powered by IMO

The Clean Up Your Data (CUYD) service from our strategic partner Intelligent Medical Objects (IMO), is easy and affordable, enabling users to improve their practice's efficiency, data integrity and reimbursement optimization. This service, for Allscripts Professional EHR™, maps italicized and unmapped clinical content to appropriate code sets, such as ICD-10, CPT and SNOMED.

How can the one-time Clean Up Your Data service help my organization?

Establishes a comprehensive dictionary

IMO terms are maintained on a continuing basis with 10 releases per year. Terms are mapped to standard coding systems like ICD-10, CPT and SNOMED.

Keeps your data current

Standard coding systems are constantly updating their data to reflect current medical knowledge and retire the old codes. IMO ensures that you have the latest versions of these systems.

Keeps your dictionaries accurate

As the world leader in its field, IMO's team of terminology experts consistently review their databases for accuracy.

How the Clean Up Your Data service works

Export terms to IMO (Professional EHR version 17.1.3 or later required)

With as few as three clicks in the Batch Terminology Mapper, you can export your terms to IMO for analysis.

Free dictionary health assessment

IMO provides you with a free report on the health of your dictionaries, analyzing the unmapped terms and showing you how many IMO can map for you.

You choose the level(s) of service you want

Automatic mapping of terms is available at a flat rate regardless of the size of your practice. Additional mapping services for more difficult terms that are not automatically mapped is a second level of service.

Terms are delivered back to your database

Automatically mapped terms are delivered to your database and seamlessly integrated into all patient charts containing those terms. Additional mapping service terms are provided for your review, and available for import into your database once accepted.

Solutions we offer

Establishing healthy dictionaries is the first step in a Terminology Management program; this requires your dictionaries to be:

- **Comprehensive.** A complete set of term descriptions without gaps is necessary to depict the clinical state of the patient.
- **Up-to-date information.** If data sources are not current, inactive or less descriptive, terms remain available for use.
- **Accuracy.** If terms are not accurate, an incorrect picture of a patient is presented in the chart.

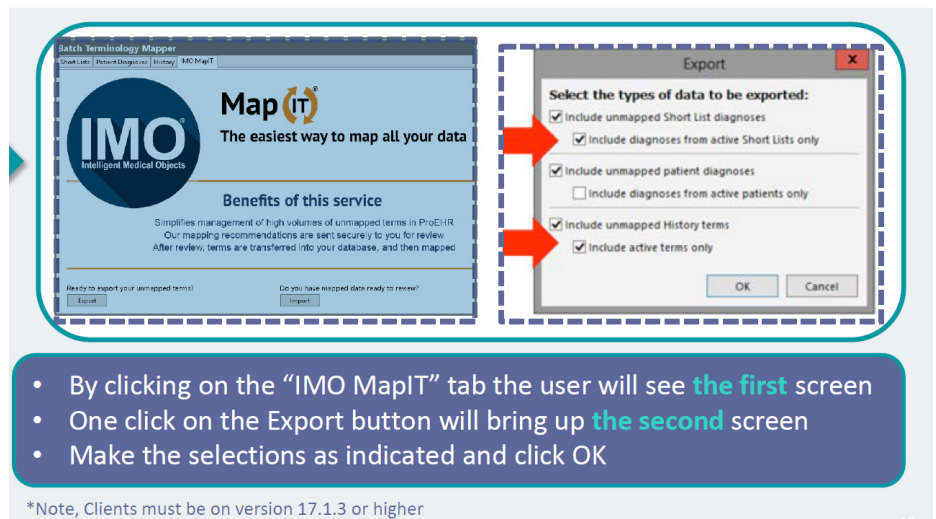

"I'll bet you none of my partners know what this is, but they certainly would know if it was gone. Our clinicians love having clean, mapped terms to document with! Also, they only deal with a fraction of the calls from billers that existed before the CUYD cleanup. Our billers and coders like it because they have a lot less work to do. The service made it easier to generate our Meaningful Use reports."

Key features

Clean Up Your Data at a glance

The process to implement the CUYD service is quick and easy. The Service enables users to quickly and easily export existing terms and maps to IMO. IMO will migrate the terms to its industry-leading medical terminology, which includes more than 5.6 million code maps. The updated linkages and code maps will then be sent for clients to seamlessly import back into their Professional EHR database.

- By clicking on the "IMO MapIT" tab the user will see the first screen
- One click on the Export button will bring up the second screen
- Make the selections as indicated and click OK

*Note, Clients must be on version 17.1.3 or higher

Outcomes we deliver

- Automatic mapping is seamless, efficient and brings all properly mapped terms into your patient charts.
- By using additional CUYD services, terms not automatically mapped are analyzed by IMO medical terminology experts, then provided to a client for review and acceptance.
- Saves resources for your practice (time and money) allowing you to dedicate those resources to the daily running of your practice.
- Any unmapped terms are not picked up in reporting, a clinician's work will be better reflected in quality assurance, population health, health information exchanges and risk reimbursement programs.
- Reduce non-mapped free text objects.

IMO terminology solutions help clinicians capture true clinical intent while attaching the correct codes for reporting and reimbursement. Every IMO medical term is mapped to standardized vocabularies, such as SNOMED CT® and ICD-10, within the Allscripts environment to give providers clinician-friendly terms without having to look up codes separately, saving time and improving patient care.
